

**LISTING OF CLAIMS**

1. (previously presented) A print medium having a rewritable data storage device attached thereto, said print medium being configured to receive a printed image, and said data storage device being configured to receive and store printing information comprising data related to properties of the print medium.

2. (withdrawn) The print medium of claim 1, wherein the data storage device is adhered to an outer surface of the print medium.

3. (withdrawn) The print medium of claim 1, wherein the data storage device is embedded within the print medium.

4. (previously presented) The print medium of claim 1, wherein the data storage device comprises a rewritable magnetic strip.

5. (withdrawn) The print medium of claim 1, wherein the data storage device comprises an optical data storage device.

6. (canceled)

7. (previously presented) The print medium of claim 1, wherein the printed image has been applied to the print medium, and the printing information further comprises data related to the printed image.

8. (previously presented) A printing system, comprising:  
a print medium configured to receive a printed image;  
a rewritable data storage device attached to the print medium, said data storage device being configured to receive and store printing information;  
a printer configured to print the image on the print medium; and

a printing information processor associated with the printer, said printing information processor comprising a data read/write processor capable of both reading data from and writing data to the data storage device.

9. (canceled)

10. (withdrawn) The system of claim 8, wherein the data storage device is adhered to an outer surface of the print medium.

11. (withdrawn) The system of claim 8, wherein the data storage device is embedded within the print medium.

12. (previously presented) The system of claim 8, wherein the data storage device comprises a rewritable magnetic strip.

13. (withdrawn) The system of claim 8, wherein the data storage device comprises an optical data storage device.

14. (original) The system of claim 8, wherein the printing information comprises information relating to properties of the print medium.

15. (original) The system of claim 8, wherein the printed image has been applied to the print medium, and the printing information comprises data related to the printed image.

16. (original) The system of claim 8, wherein the printer is an ink-jet printer.

17. (withdrawn) The system of claim 8, wherein the printer is a laser printer.

18. (original) The system of claim 8, wherein the printer and the printing information processor are integrated.

19. (withdrawn) The system of claim 8, wherein the printing information processor is an auxiliary unit that is operable remote from the printer.

20. (previously presented) A method for associating printing information with a print medium, comprising steps of:  
attaching a rewritable data storage device to a print medium; and  
storing printing information on the data storage device, said printing information comprising data relating to properties of the print medium.

21. (withdrawn) The method of claim 20, wherein the step of attaching the data storage device to the print medium includes the step of adhering the data storage device to an outer surface of the print medium.

22. (withdrawn) The method of claim 20, wherein the step of attaching the data storage device to the print medium includes the step of embedding the data storage device within the print medium.

23. (previously presented) The method of claim 20, wherein the data storage device comprises a rewritable magnetic strip.

24. (withdrawn) The method of claim 20, wherein the data storage device comprises an optical data storage device.

25. (canceled)

26. (original) The method of claim 20, wherein the step of storing printing information on the data storage device includes the step of storing information relating to printed material applied to the print medium on the data storage device.

27. (currently amended) A print medium having a data storage device attached thereto, said print medium being configured to receive a printed image, and said data storage device being configured to receive and store printing information comprising data related to, but not entirely duplicative of, content of the printed image.

28. (previously presented) The print medium of claim 27, wherein the data storage device comprises a magnetic strip.

29. (previously presented) The print medium of claim 27, wherein the printed image has been applied to the print medium, and the printing information further comprises data related to properties of the print medium.

30. (currently amended) A method for associating printing information with a print medium, comprising the steps of:

attaching a data storage device to a print medium; and

storing printing information on the data storage device, said printing information comprising data related to, but not entirely duplicative of, content of a printed image applied to the print medium.

31. (previously presented) The method of claim 30, wherein the data storage device comprises a magnetic strip.

32. (previously presented) The method of claim 30, wherein the step of storing printing information on the data storage device includes the step of storing information relating to properties of the print medium.
